BREAKING NEWS

600,000 employees need reskilling in 3 to 5 years, says Sim

Human resources minister Steven Sim (left) said while some jobs would diminish, it did not necessarily mean that people would be out of work. Next to Sim is TalentCorp Group CEO Thomas Mathew.

KUALA LUMPUR: About 600,000 employees from several sectors would require reskilling in the next three to five years with the growth of artificial intelligence (AI), digitalisation and the green economy, according to a study by a government agency.

Problem Statement

1

- New AI tools and frameworks emerge constantly, making it difficult to distinguish lasting skills from short-lived trends.

2

- Traditional learning roadmaps are static, leaving students and developers uncertain about what to learn next or when to pivot.

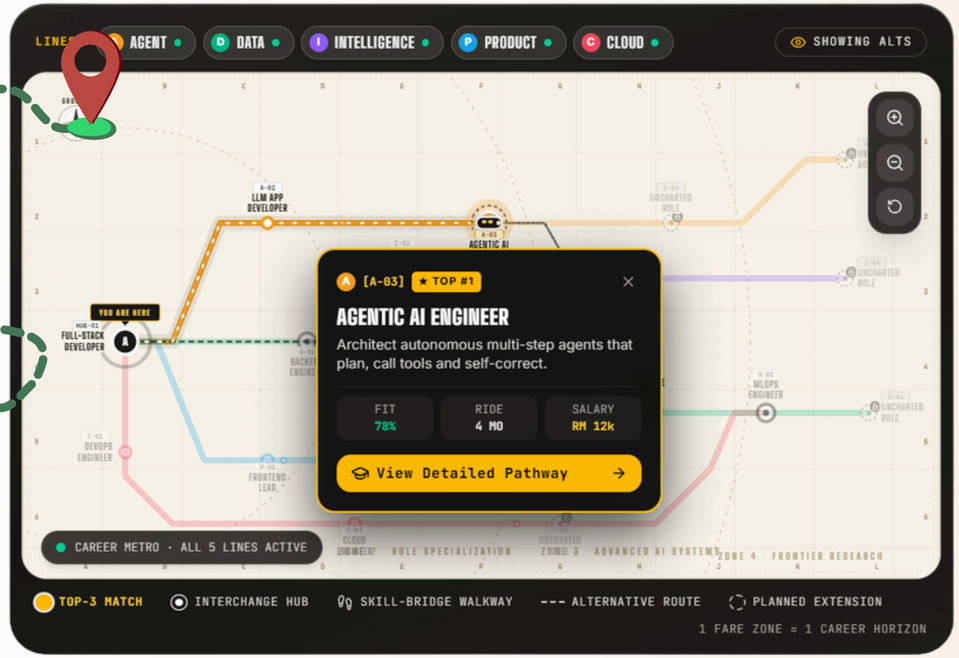

AI is evolving faster than our skills can keep up

Proposed Solution

1. The Interactive Career Metro Map

- **What it is**: A visual subway map where tech roles are stations and lines represent career domains (Agent, Cloud, Data, Intelligence, and Product).
- **Why it stands out**: Instead of scrolling through walls of text on job portals, users can visually see where their current skills sit, how roles connect, and where they can "transfer lines" to enter AI roles without starting from zero.

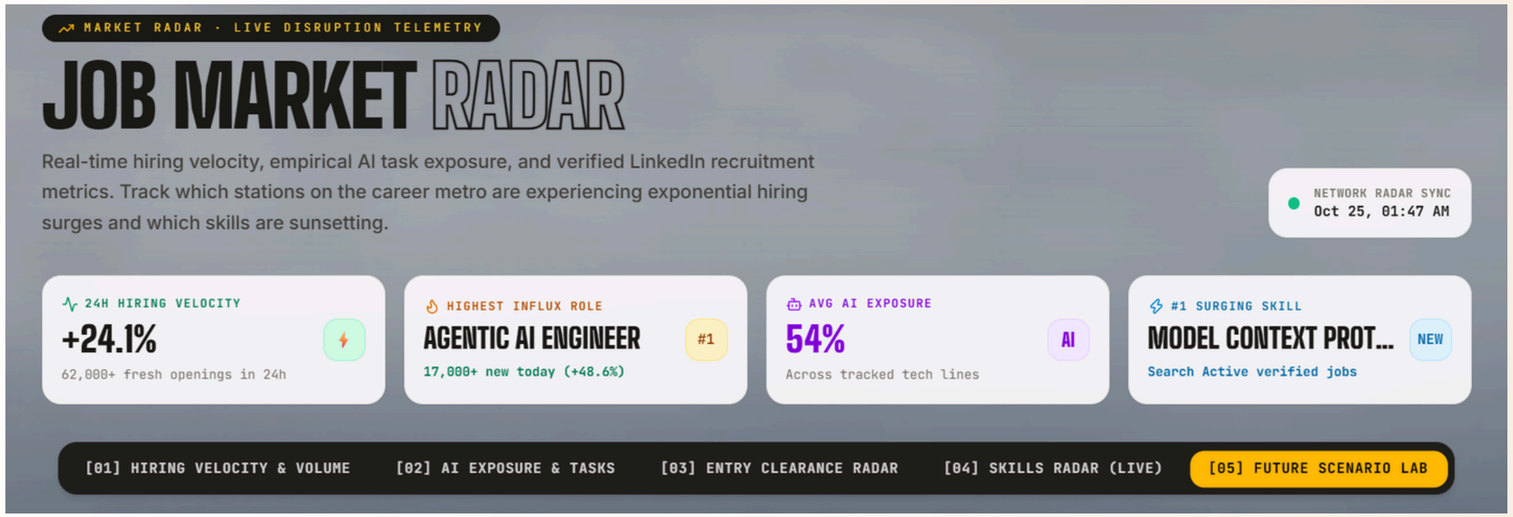

2. One-Click Resume Ingestion & Skill-Gap Roadmap

- **What it is**: Upload a resume in any format—PDF, Word, or even a screenshot.
- **Why it stands out**: The system instantly highlights two things: what you already have and the exact gaps you need to fill. It then builds a milestone-by-milestone learning plan with free tutorials, real project capstones, and certified course options.

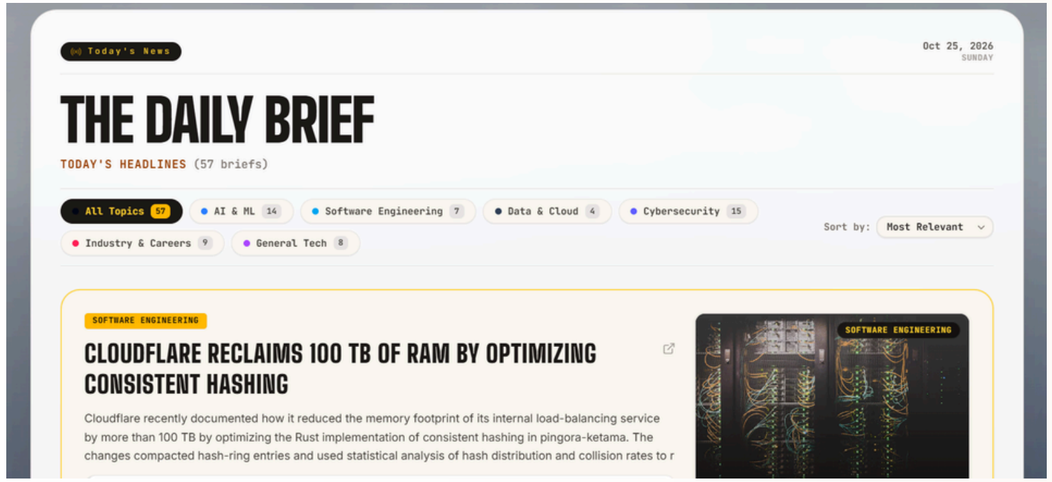

3. Live Job Market Radar

A ***real-time data engine*** that monitors live job postings, hiring volumes, and salary benchmarks.

Why it stands out: Users ***don't waste months learning outdated tools***. They see which skills are gaining momentum, which are cooling off, and where the real hiring demand is right now.

"Turn today's tech shifts into tomorrow's career advantage."

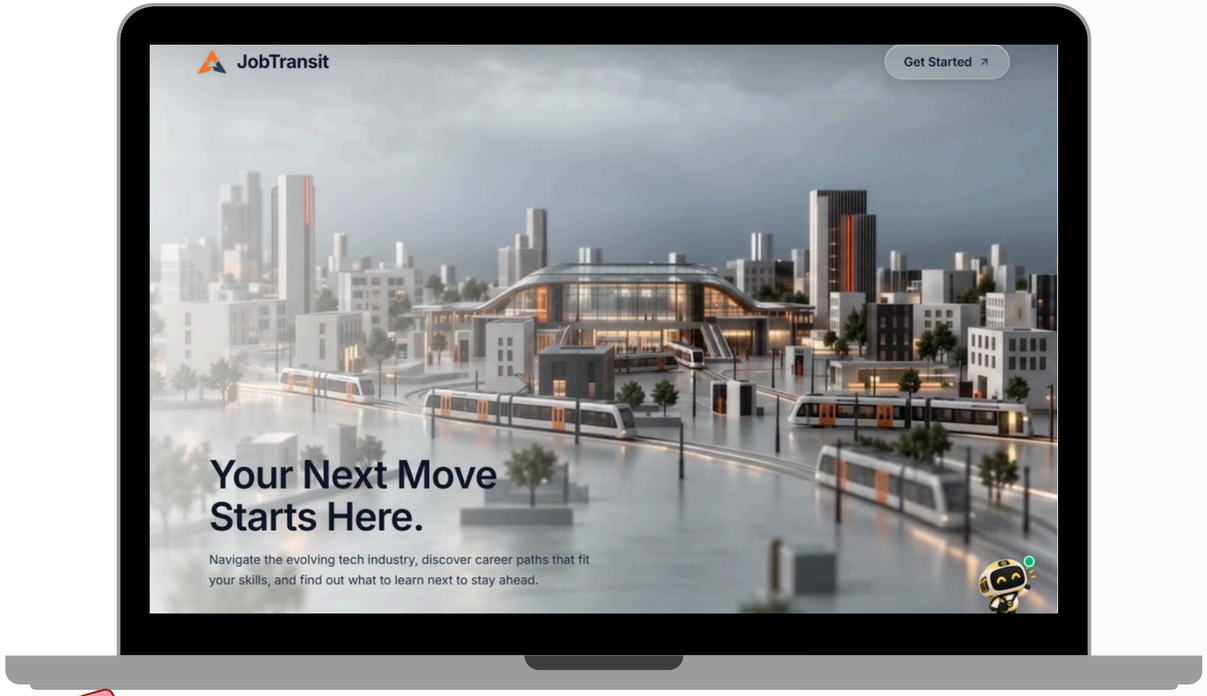

4. Daily AI Catchup

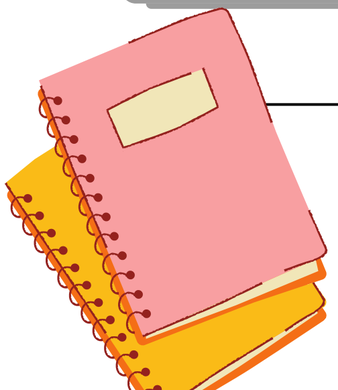

an ***AI-curated intelligence feed*** that transforms fast-moving tech breakthroughs into ***bite-sized career insights*** and ***actionable skill recommendations*** for your next job transition.

Introducing JobTransit.

It is an AI-powered career navigation and reskilling platform that visualizes tech roles and skill transitions as an interactive subway transit map, providing personalized learning pathways, resume competency mapping, and real-time job market insights.

How JobTransit Works?

STEP 1
Ingest

- **Client-side parser** extracts raw text from uploaded resumes (PDF, Word, or image via OCR).
- **Extraction engine** identifies verified technical skills, frameworks, and past role experiences.
- **Skills terminal** prompts quick clarification for emerging or ambiguous competencies.

STEP 2
Map

- **Transit algorithm** compares user profile against 5 specialized metro lines (Agent, Cloud, Data, Intelligence, Product).
- **Calculates match scores** across each station to pinpoint the user's current starting position.
- **Highlights interchange hubs** where existing skills directly transfer into AI-era roles without starting over.

STEP 3
Bridge

- **Target selector** lets user choose their destination station (e.g., Agentic AI Engineer).
- **Gap analyzer** separates existing competencies from the exact missing skills needed.
- **Pathway builder** generates an ordered roadmap with curated free tutorials, hands-on capstone projects, and certified course options.

STEP 4
Validate & Track

- **Market crawler** checks live job postings to verify real hiring demand, salary ranges, and skill momentum.
- **Interactive 3D Transit Pass** logs completed milestones and XP to Cloud Firestore in real time.
- **Daily Catchup feed** delivers concise, role-specific "Why It Matters" tech news digests.

Technical Approach

Frontend / UI

- **React 19, TypeScript, Vite, Tailwind CSS, Lucide React**

Modern, fast and responsive user interface with a clean, accessible design system.

Backend & API

- **Node.js / Express (or Cloud Functions)**

REST API executing session rules, validation logic, and profile updates.

Database & Authentication

- **Google Firebase (Cloud Firestore & Firebase Auth)**
  - **Firebase Auth**
    Seamless user authentication and session management.
  - **Cloud Firestore**
    Flexible NoSQL document database storing user profiles, question banks, answer provenances, and generated Transit Cards with real-time sync.

GenAI Layer

- **GenAI API (Google Gemini API)**

Structured JSON schemas for CV parsing, skill extraction, and personalized question generation.

Hosting & Deployment

- **Replit**

Reliable cloud hosting, continuous deployment and easy collaboration for fast iteration.

What impact our system brings?

1

Economic Impact

Help people move into in-demand careers, improve their earning potential, and make better use of training resources.

2

Social Impact

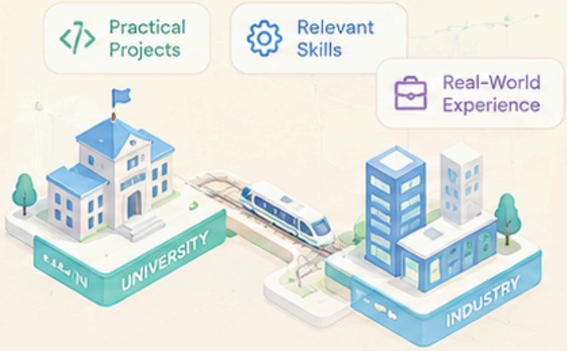

Make career changes less stressful and more accessible through affordable learning and personalized guidance.

3

Education Impact

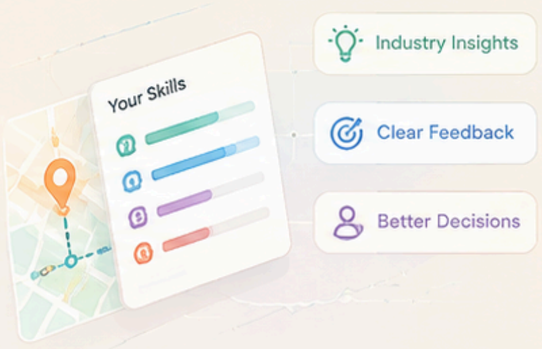

Bridge the gap between university learning and industry needs through practical projects and relevant skills.

4

Market Fairness

Give everyone access to career insights and clear skill-gap feedback, helping them make informed decisions.

Thank You!

Your next career stop is waiting—let's get you on board.
